

Timetable color settings

PC CADDIE allows you to customize the timetable's color settings under **Timetable/Configure Timetable-Colors**:

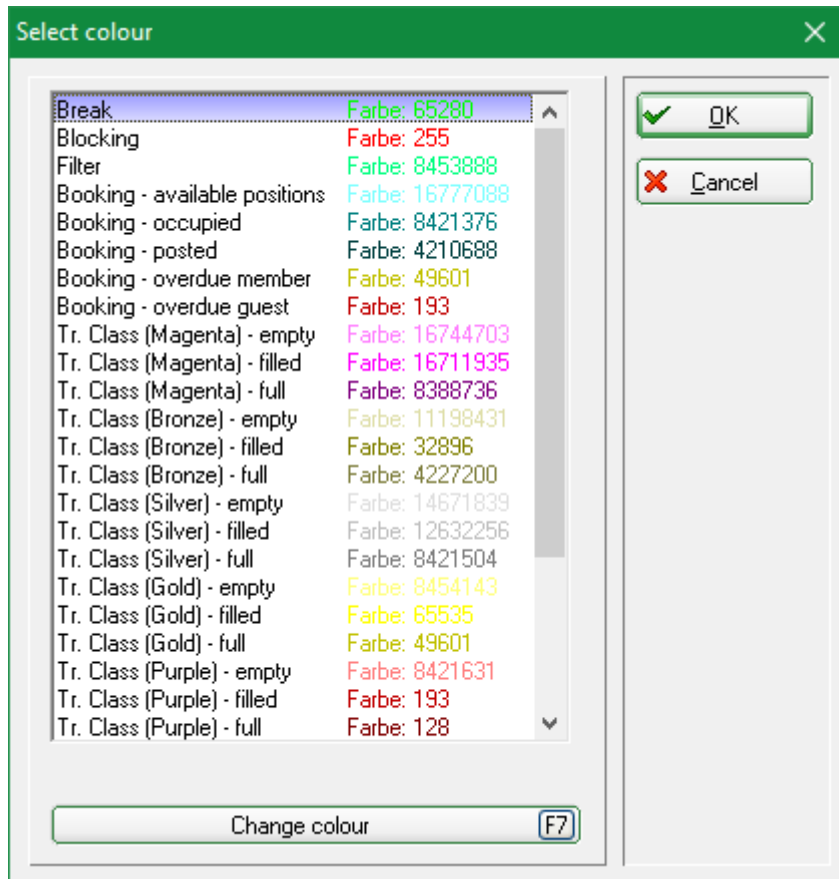

Here you select which color settings should be used. It is possible to have the same color settings everywhere, or to make separate settings for Terminal and Timetable-Pur.

In addition there is the option to generate several individual color settings.

The following special parameters must be used:

- **TIME_COLSEL** allows different color settings in the timetable
- **TIME_COLUSER: 1** (or 2 or 3) uses the templates „User defined 1 to 3“

Enter the desired color scheme under the menu item **Timetable/Configure Timetable-Colors**:

Activate with the cursor the function for which you want to change the color and press **Change color (F7)**.

Use discrete colors with a good, mutual contrast. The PC CADDIE basic settings usually helps.
