Flat rate evaluation

If you decide to work with consumption flat rates in the future, please contact PC CADDIE support. The flat rate evaluation is included in the cash register module, but must be set up beforehand.

The lump sum evaluation enables you to close your accounts by allowing previously defined lump sums to expire directly and/or credit top-ups to be carried over to the new accounting period.

If the consumption flat rates are to be sent with the club's annual invoices or integrated into them, proceed as usual.

Create article

You are in the same account area in which your club contributions are created. When creating the articles, make sure that the allocation is correct based on the personal characteristics. If your consumption allowance is collected from a different account, it may also make sense to use a separate account area for this.

Fee type		×

These items are then allocated to the individual persons via the Automatic contribution allocation together with the club contributions to the individual persons and invoiced.

Transfer to another account area

The invoiced lump sums must now be credited to the customer's accounts in the corresponding account area (here **OP**). To do this, go to the menu **Turnover/Year-end closing/ Transfer** *individual postings to another account area.*

Personen:	Alle Kontakte		▼ Definieren		

Select the account area to which the transfer is to be made (normally **OP,OPGASTRO** or **RECEIPT**).

The same article must be created in the target account area that you have previously invoiced in the club account area, i.e. the article for the consumption flat rate must exist with identical abbreviations and the same name in both the base area and the target area.

If you change the status from "Invoiced only" to "OK bookings only", a credit will only be transferred if the invoice has been paid with the consumption allowance.

The item now appears as an open credit in the account for the individual persons.

Posting without invoicing

Do not create the annual invoices <u>not</u> via PC CADDIE, switch directly to the account area from which you create the catering invoices (normally **OP**, **OPGASTRO** or **CATERING**). Here you now select via **Turnover/Automatic contribution allocation** the function **Assignment of individual articles based on special person groups.**

Enter here the fee types, the prices and the listing mode! Pay attention to the individual grouping (Who pays what type of fee?) Check using button '#' (definition of automatic transfer)! Bookings on account

If consumptions are now posted openly on account during the season, they appear with the corresponding voucher number in the open item account of the persons.

As soon as the account shows a "debt" (consumption allowance included), an invoice is generated during the next invoice run. Under **Turnover/Print/Invoices** you define the minimum balance to be taken into account during the invoice run.

- 1. Select the person/family either by entering the search abbreviation or the name, or via the list button on the right.
- 2. Select the time period to be analysed.
- 3. Decide how you would like the data to be analysed.
- 4. This takes you back to the previous window
- 5. This takes you to the year-end posting function
- 6. This takes you to the more detailed settings for the year-end closing

Configuration of the query

The configuration of the query is important for the year-end closing. This list is used to display what is posted at the end of the year. Depending on the club, customer credits are handled very differently.

The date on which the minimum consumption should expire and the bottom four lines are important. Define which product groups <u>not</u> are to be settled via the consumption flat rate and what is defined as an additional payment (customer makes a deposit) and should not expire but be posted as a credit to the next year.

• **Minimum consumption** \rightarrow Product group of the consumption flat rate items

- Additional payment → Product group of payments or rebookings by the customer that do not expire
- **Other** \rightarrow Product group of items that are not included in the flat rate
- **Catering voucher** \rightarrow Material group for the carryovers from the catering account area

The other tick boxes are to be understood as follows:

• Summarise families

As soon as this box is ticked, the family account balance is displayed in the catering cash register for the individual family members. However, the consumptions are booked to the respective person as normal. This prevents a family member who has used up the lump sum from making additional payments even though another family member still has a remaining lump sum balance. If a family wishes to keep a separate bill, the additional info nfams must be entered for each family member.

For the group of persons, take into account that there are people who are contact persons but not members, etc. Create a filter for these persons. Create a filter that includes these people.

Calculate family accounts together chronologically

Family accounts are counted as one account. Credits do not expire for the individuals, lump sums are calculated as a total. If the function is not activated, the lump sums are forfeited for the individual members of the family grouping.

- Show family transfers Transfers within the family are shown
- Include family transfers Family rebookings that were made through invoices are included in the total.
- Include bookings before the period The complete account is calculated.
- All incoming payments as an additional payment The payments made are calculated as a top-up payment.
- *Include closing entries* The closing entries are included.
- **Display zero postings** An account entry is made, even if the amount is 0.
- **Person group** Which persons should be included in the overview?
- Additional information Consumption is not in the account but in an info field.
- WithInfoDate Info field should be posted to this date.

Year-end closing entries

The prerequisite for the year-end closing entries with possible carryovers is the creation of the respective articles, which are then assigned to the respective function.

Last	Date of last consumption		
Amount	Value of the last consumption		
Flat rate	Value of the originally booked consumption flat rate (individual or family combined)		
Payment	Payments made (in advance)		

Consumption	Total amount of consumption
Other	Consumptions that were not charged against the flat rate
Residual lump sum	Residual value of the original lump sum after deduction of consumptions; the amount is forfeited
	Current account balance (remaining credit minus consumption)
Residual balance	Credit or debt that is carried forward to the next year

Any discrepancies must now be corrected. If the lists are in order, play it safe and make a Fast data backup . Then run the year-end posting.

Archiving the operating theatre area with consumption flat rates

The operating theatre or per diem area can be closed like a contribution account area after the per diem evaluation. However, you must be aware that the debt from the previous year is not offset against the consumption allowance in the new year. Although this appears to be the case in the account, it is not included in the flat-rate evaluation.

Balance carryovers have a special entry and of course cannot be offset against the consumption credit, as this is intended to cover everything from one year - something that comes in through an annual carryover therefore does not belong in the lump sum.
